**OFFICE ACTION**

***Election/Restriction***

1. This invention application contains claims directed to two (2) patentably distinct species:  
Group (I) of claims 1-7, drawn to a method of manufacturing electronic components using a print mask, is classified under class 438, subclass 653; and  
Group (II) of claim 8-11, drawn to a method of manufacturing a flip-chip integrated circuit, is classified under class 438, subclass 627.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Applicant must choose one species from the two Groups, because of:

\* The barrier metal layers provided on a wafer, in Group I, is not the same as a plurality of adjacent barrier metal layers, in Group II, because passivation layers are found to cover circuit pattern liners, which are specifically provided between the adjacent barrier metal layers.

2. Applicant is advised that the reply to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37CFR 1.143).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
